energy solutions*

Wind Energy
Grid Connect Solar
Remote Area Power Systems
Energy Management

Company Profile

Established in 2006, Renewablelogic has fast become one of Western Australia's most renowned renewable energy firms.

Renewablelogic was conceived from the desire of company director, Brett Easton, to provide a cleaner, more sustainable environment for his children and future generations to enjoy, with the aim of making renewable energy accessible to private and commercial residences throughout Western Australia.

With this in mind, we offer complete sustainable energy solutions, ranging from energy management, to grid connect solar power, remote area power systems and wind energy power systems.

Renewablelogic is distinguished from other renewable energy companies by the combination of the quality of our products and services, our access to extensive resources through association with parent company, Cablelogic, and our commitment to practising what we advocate.

We recycle 90% of all waste, run a fleet of hybrid cars and have implemented a number of energy management policies to better manage our energy use. We also offer our employees a subsidised solar power system to enable them to make a difference at home.

With collective experience of over 20 years in the renewable energy industry, Renewablelogic is able to confidently provide quality solutions that are both innovative and reliable. Our sustainable energy solutions will provide Western Australian individuals and organisations with financial and environmental benefits for many years to come.

What do we do?

Grid Connect Solar.

A grid connect solar power system generates electricity from sunlight to power your private or commercial premises, while still being connected to the mains electricity grid. With a grid connect solar system you will not only generate your own power but you will have the freedom to sell excess electricity back to the grid or to draw additional power from it as needed.

We can recommend a grid connected solar power system that will reduce, or completely meet your electricity needs.

Remote Area Power.

Remote Area Power Systems (RAPS) are a cost-effective alternative to generating power in rural and remote areas, where cost and distance prohibits connection to the main electricity grid. Some of the many benefits of a renewable Remote Area Power System include continuous availability of power, improved power quality and reduced diesel noise.

We can provide a clean energy solution that will help to greatly reduce your running costs, carbon emissions and reliance on diesel generation.

Energy Management

Energy Management is the process of identifying and reducing your energy consumption. Reducing energy wastage is fast becoming an essential practice as energy prices rise and carbon emissions trading becomes mandatory.

We offer complete Energy Management solutions that provide greater energy savings and emissions reductions for less cost than through any other measure.

Wind Power.

A wind power system generates electricity from the wind to power your private or commercial premises. Wind energy is a great complement to solar energy in generating power for your home or organisation.

Renewablelogic will soon be supplying innovative wind power systems for residential and commercial applications.

Why Renewablelogic?

No matter what renewable energy solution you are considering, be it grid connect solar, grid connect wind, remote area power or energy management, it is a significant investment and one that you should make with complete confidence. With so many renewable energy providers to choose from, how you can be sure that Renewablelogic is the right choice for you?

Here are some reasons Renewablelogic is the logical choice:

- **Dedicated project manager for each client.** Our project managers will take care of everything from beginning to end, from your government rebate application to your energy evaluation report, giving you one single point of contact.
- **Post installation support.** We offer complete post installation support, including extensive warranties on all of our products and telephone support for technical assistance, to give you complete peace of mind.
- **Extensive technical skills.** Our relationship with Cablelogic and commitment to continuous training in a number of disciplines ensures that our employees have a broad range of technical skills.
- **Quality Assured.** Quality is not just a word to us; it is a way of business. We are a quality assured company under AS/NZS ISO 9001, and we are currently working towards certification in Environmental management ISO 14001 and OHS 4801.
- **BCSE Accredited:** Our team of designers and installers maintain BCSE accreditation so you can be sure that your system is designed to the highest possible standards and will be eligible for both government and RECs rebates.
- **We walk the walk and talk the talk.** We practise what we advocate. We recycle 90% of our waste, run a fleet of hybrid cars and we are continually implementing new energy management strategies to better manage our consumption.
- **Strong occupational health and safety work ethic.** We work hard to provide a workplace that has the highest level of occupational health and safety, so that the safety of our workers is ensured and our customers are protected.

What do our clients say?

"From the first planning to the final execution of the job there were no problems. Everything was taken care of and we were kept informed of progress at every step of the way. We could not be happier with the decision we made to have solar power installed."

Pam and John, Safety Bay, WA.

"Renewablelogic provided us with a simple solution that met our requirements. All of the bureaucracy and paperwork was completed painlessly with the assistance of our Project Manager. The installation team were professional and friendly and our system produced power immediately."

Samantha, Bayswater, WA.

"They took 1 and a half hours from start to finish to install our solar power system. The person that initially assessed our property was excellent and the team that installed our solar power system was first class. Everyone from Renewablelogic was friendly and helpful, answering any queries that we had along the way. I am really glad that we choose Renewablelogic to make the switch to solar power."

Derek, Shenton Park, WA.

"My experience with Renewablelogic was very positive and I highly recommend them to anyone thinking about installing solar power to their home. The system was installed so effortlessly it took only half a day before the system was producing power. I am now receiving credits on my bill from Western Power for the excess power my system is producing. I could not be happier"

Carol, Wembley, WA.

"We could not have been happier with the service and end product that lets us do our small part to reduce Australia's carbon footprint."

Robert, Huntingdale, WA.
